

Drake's 1st Wireframe

Description: A money-less skill exchange web SPA that allows users to view their communities skills, hobbies, + knowledge based on user profile presentation. If users want to connect they can start a dialogue + hopefully exchange skillsets!

App Functionality

- This app would be an SPA with many states.
- It would need to house User Data + Profiles
- It would need to present profiles to other users (like a dating app)
- It would need Chat-Fxn
- It would be a Web App that is simple + looks great on mobile
